

Join us for an event hosted by our Inpatient Rehab **Department and Stroke Coordinator to learn about** stroke awareness, treatment, prevention, and therapy.

The first hour of the event will focus on recognizing stroke symptoms (BE FAST), seeking medical care, stroke treatments, and prevention strategies like managing blood pressure and adopting a healthy lifestyle. It will also feature discussions on therapy, including brain function differences, early intervention, and recovery strategies. The second hour will include a Q&A session, success stories, and open social time. Refreshments will be provided!
